

Ideation Phase

Define the Problem Statements

Date	7 July 2026
Team ID	SWTID-2026-2247
Project Name	Emotion Detection and Learning Support Engine
Maximum Marks	2 Marks

Customer Problem Statement Template:

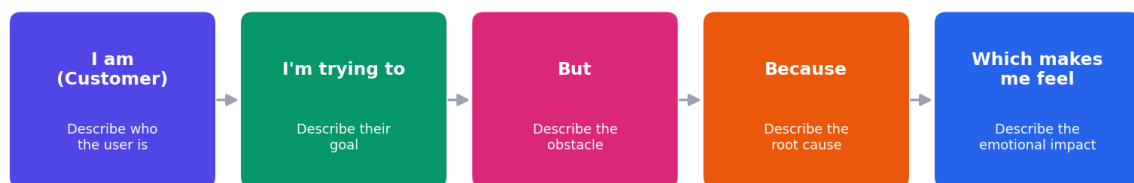

This template is used to define the core problem statements for the Emotion Detection and Learning Support Engine, capturing the users' point of view before building the emotion detection and guidance features.

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges users face when trying to express and manage their emotions. Throughout this process, the team empathizes with users, which helps in designing an emotion detection and guidance experience that truly understands them.

Why This Matters:

Without a clearly defined problem statement, teams risk building features that don't map to real user pain points. For an emotion-aware system in particular, understanding exactly who the user is, what they are trying to achieve, and what emotional gap they are experiencing is what shapes accurate model design, believable AI responses, and a genuinely supportive user experience.

Customer Problem Statement Framework

Used to capture PS-1 and PS-2 for the Emotion Detection and Learning Support Engine

Example:

Example — PS-1: I am a college student juggling academics and personal stress. I'm trying to understand and manage my emotions in the moment. But I don't always have someone available to talk to. Because mental health support is limited or feels stigmatized. Which makes me feel isolated and unheard.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A college student juggling academics and personal stress	understand and manage my emotions in the moment	I don't always have someone available to talk to	mental health support is limited, costly, or feels stigmatized	isolated, unheard, and anxious
PS-2	A working professional facing daily pressure and mood swings	get quick, empathetic guidance when I'm frustrated or anxious	generic self-help content doesn't address my specific emotional state	most tools don't detect nuanced or mixed emotions accurately	unsupported and disconnected from the tools meant to help
